

Dory

DORY is a young (maybe 2yr), Lab/terrier blend, spayed, current on vaccines, hw negative, flea free and micro-chipped. She is crate trained, house trained, and will walk well on leash without pulling (after a little playtime initially). DORY enjoys being with her human companions and playtime with canine friends is an important energy release for this young girl. She thrives on companionship which is understandable since she spent numerous months waiting in our county shelter. She does well with women and children and most men. Appropriate introductions to strangers are crucial for this girl to feel comfortable .

Dory enjoys car rides AND sniffing the *smorgasbord of scents* along a path, in a forest, and in her own backyard...so a little time to EXPLORE first is always good prior to_a walk or play session. **We know a "tired dog is a good dog", SO...** a family with a (male) dog would be a good match to help deplete her energy and provide some companionship. We know an older dog could help her become acclimated to the rules and routine in a new home and family. She currently resides in a foster home with other (adult) dogs; there is no aggression and no guarding. DORY has graduated from a 6 week training course to help her with basic obedience, manners and socialization...and is currently working w/a trainer for additional socialization.

DORY is very **smart** (loves training and is a quick learner), and... her recall is strong because DORY's joy and contentment in life comes from her companionship with family - people she knows and trusts, and other canine friends. Dory has a very short toy list: a rope toy and jolly ball w/a string attached. We recommend children over 10 years of age in her forever family, and a fenced yard.
