

Kona

KONA is a handsome, black lab mix, approx 3 yrs young, approx. 70lbs of LOVE, neutered, crate trained, house trained (still a bit of a counter surf), and current on all vaccines, hw negative, and micro-chipped. He was pulled from our county shelter in April due to lack of interest, had a terrible ear infection and some skin infection as well...now HE is completely healed and healthy, AND would love to be your forever family companion! **Kona's caretaker describes him best as a "big goofy boy" :-)** who would do great with someone that **ENJOYS the great outdoors as much as he does.** If hiking and walking is an activity YOU enjoy routinely then KONA is your boy. Kona loves to be a part of life's party whether it is with one or many people.....his personality seems to blossom when there is crowd and he is a welcomed participant at the party or family gathering or one or more. With visitors, Kona gets excited, he does a butt wiggle, tail wagging; if too excited he may attempt to stand on 2 hind legs...his training has reduced his standing and touching the person/visitor significantly. Kona likes to chase balls and chew on the larger ones, HE has some favorite rope toys, enjoys resting in his bed, and likes to suck (nurse) on his blanket. He does great in the car, rides well, and enjoys it. Kona currently lives with other dogs (male and female), various sizes, none larger than him. He has not been tested with cats. Children older than 12 years of age is recommended, along with a fenced yard. For questions about KONA, Email petsRRpassion@gmail.com , Adoption application is located on the ADOPTME page at DREAM4pets.org.
